

Release Notes

January 2014 - 3.101.2375.0

Enhancements

Handheld

- #2376 The same Container can now be re-used in a Run
- #2376 Undumping a dumped container checks to ensure that the container can only be undumped if it has not had any subsequent activity

Sales

- #2367 View and Print (vs. selecting print directly) now triggers the Loading Instruction Version # function in the Sales Order Grid

Accounting

- #2372 Cost Posting selection logic changed from > to >= on the FromDate comparison.

Production

- #2367 When re-printing Pallet Tags, there is now an option to opt out of re-printing Box Labels

Purchasing

- #2377 A new menu item called **Duplicate to new Purchase Order** was added to the Purchase Order master list right-click menu. This feature will make a new Purchase order and copy the following data from the source: **Station, Freight Terms, Payment Terms, Pay To, Ship To, Delivery Contact, Delivery Phone #, Product Lines, Add-on Lines, Product line notes and the notes Tab.**

Supplier Receipt

- #2377 Supplier Receipt - There is a new selection available under the right-click menu on the Supplier Receipt master list called **Duplicate to new Supplier Receipt**. This menu item appears only when a single Supplier Receipt is selected.

AGMA Module

- #2377 Pressing the "Import Products" button in the AGMA configuration screen will now perform a save of the default UOM and underlying company configuration.
- #2377 In the AGMA configuration screen the + button on load will now correctly generate and assign a new load. Previously this button would launch the load creation screen.

For information on the AgMA module, please call our sales team at 208-362-3773 or email sales@unisunsoftware.com

Release Notes

January 2014 - 3.101.2375.0

Repair Notes

Production

- #2371 **Inventory Item** master list maintains grouping after refresh
- #2371 Hybrid Tag detail grid for the **Item Detail** saves layout changes correctly

Sales

- #2371 Implemented a Price Schedule overlapping date range check

Handheld

- #2376 If **Pack Bins** is selected from a run that has no Packout Plan Products, and a container is scanned, the Handheld will now display an error message, instead of a null reference exception.
